

SIRIL FRANKLIN A

531, Kalathupatti, Manapparai, Trichy, Tamil Nadu | sirilfranklin07@gmail.com |
<https://siril-franklin.github.io/Personal-Portfolio/> | contact :9750883547

PROFILE

A highly motivated Bioinformatics postgraduate with a strong foundation in computational biology, genomics, cheminformatics, and data analysis. Skilled in pangenome analysis, genome annotation, molecular docking, chemical database analysis, machine learning, and biological data interpretation, complemented by proficiency in Python programming and web development. Passionate about leveraging computational and analytical approaches to accelerate drug discovery and solve complex biological challenges. Committed to continuous learning, innovation, and delivering impactful solutions while contributing effectively to collaborative, interdisciplinary research and technology-driven organizations.

EDUCATION

- **B.Sc. Bioinformatics**
Bishop Heber College, Bharathidasan University, Trichy, Tamil Nadu
2022 – 2025 | CGPA: 8.0/10
- **Diploma in Bioanalytical Techniques**
Bishop Heber College, Bharathidasan University, Trichy, Tamil Nadu
2022 – 2025 | CGPA: 8.0/10
- **Higher Secondary School (HSC)**
Lakshmi Matriculation Higher Secondary School, Manapparai, Tamil Nadu
StateBoard | 2020 – 2022 | Percentage: 83%

SKILLS

- Bioinformatics & Computational Biology, Comparative Genomics, Pangenome Analysis, Genome Annotation, Sequence Analysis
- Molecular Docking, Structure-Based Drug Discovery, Cheminformatics, Chemical Database Analysis, Machine Learning for Biological Data Analysis
- Python Programming, Linux, Shell Scripting, Data Analysis, Scientific Visualization
- Web Development (HTML, CSS, JavaScript), Database Management (MySQL)
- Problem Solving, Communication, Teamwork, Analytical Thinking

INTERNSHIPS/WORKSHOPS

- 15-Day Online Internship on RNA-Seq Data Analysis – GENEFITHUB
- Machine Learning Internship on Drug Resistance Prediction – GENEEL
- Artificial Intelligence for Biological Data Analysis Internship – Insilicomics
- Python Code Challenges for Data Analysis
- SQL for Exploratory Data Analysis Essential Training

PROJECTS

Drug Designing Using Machine Learning

Academic Project | 2023 – 2024

- Developed predictive models to estimate pIC50 values for EGFR inhibitors using molecular descriptors from canonical SMILES.
- Applied algorithms including XGBoost, LGBM, and RandomForest.
- Contributed to the advancement of targeted cancer drug discovery.

Smart Alcoholic Monitoring System

Web Development Project | 2024

- Created a biometric web-based system to identify underage alcohol consumption using fingerprint recognition.
- Integrated Aadhaar-linked data for real-time monitoring and secure identification.

Phytochemical-Based Drug Discovery for Hyperlipidemia

Academic Project | 2025 – 2026

- Investigated fenugreek (*Trigonella foenum-graecum*) phytochemicals as potential therapeutic candidates for hyperlipidemia.
- Performed ADMET screening, target prediction, network pharmacology, and molecular docking to identify promising compounds.
- Identified potential phytochemical–target interactions for therapeutic exploration in hyperlipidemia.

AREA OF INTEREST

- Bioinformatics, Computational Biology, Genomics & Comparative Genomics
- Computational Drug Discovery, Molecular Docking & Cheminformatics
- Machine Learning, Artificial Intelligence & Biological Data Science
- Python Programming, Data Analytics & Database Management
- Web Development, Software Development & Emerging Technologies

ACHIEVEMENTS

- Photography Enthusiast
- Active in Sports
